PROFESSIONAL SUMMARY

Technical Product Support professional with 3+ years bridging customers, engineering, and product to solve AI, data, and workflow challenges. Experienced troubleshooting APIs and automation workflows, translating customer feedback into product improvements, and creating documentation that helps users succeed independently. Passionate about building exceptional customer experiences in fast-paced startup environments.

SKILLS

Customer Support & Product: Technical Troubleshooting, Customer Support, Product Documentation, Root Cause Analysis, Cross-Functional Collaboration, Stakeholder Communication

AI & GTM Platforms: Clay, N8N, Prompt Engineering, Claude API, GPT-4o, RAG, LangChain, pgvector, Ollama

Programming & APIs: Python, SQL, JavaScript, REST APIs, Microsoft Graph API, FastAPI

Productivity and Developer Tools: Jira, Notion, Azure, Docker, Git/GitHub, Azure Functions, CI/CD, Power BI

WORK EXPERIENCE

AI Solution Engineer | People360 by Insala Jun 2025 - Present

- Served as the front-line technical contact for internal users, troubleshooting production AI workflow failures and partnering with engineering to resolve recurring issues across Python and Azure OpenAI integrations.
- Investigated reliability and cost complaints tied to third-party tooling, then partnered with engineering to deliver a secure in-house replacement (Logic Apps, Outlook API, AES-256 encryption), resolving the issue and cutting costs ~\$1,200/quarter
- Authored internal documentation and onboarding guides translating complex system architecture into plain language, reducing repeat questions and speeding up new user onboarding
- Translated user and stakeholder feedback into product requirements, collaborating across engineering and business teams to deliver a production-ready multi-client MVP in six weeks.

Technology Analyst | University of Texas at Dallas, OIT Jun 2023 - Dec 2023

- Identified recurring software distribution and device support issues, translating support patterns into fixes that improved operational efficiency by 20%
- Investigated user friction points on key web applications and delivered recommendations that improved user engagement by 25%

Data Science Associate | AstraZeneca Jun 2021 - Jul 2022

- Investigated patterns across 1M+ customer records to surface an unaddressed user need, translating the finding into a targeted intervention that improved response rates by 12%
- Performed root cause analysis on clinical trial data issues, improving dataset accuracy by 25% before downstream decision-making.
- Coordinated QA and testing efforts with Big 4 consulting partners, serving as the communication bridge between technical teams and external stakeholders.

PROJECTS

BrandE - Content Intelligence Platform | [Link](#) ■ **Hackathon Runner-Up**

- Identified the challenge of turning fragmented marketing data into actionable insights and designed an AI-powered platform using Claude API, React, FastAPI, Supabase/pgvector, and Docker. Enabled semantic search and multi-stage AI reasoning, validating the solution across 5 real events and 1,000+ synthetic records at \$0.011 per **inference cycle**.

AI Product Copilot | [Link](#)

- Identified repetitive documentation bottlenecks in product development and built an AI-powered copilot using Claude API to generate user stories, acceptance criteria, database schemas, and QA test cases from PRDs and feature requests.
- Designed the workflow around how cross-functional teams actually work, helping Product, Engineering, and QA collaborate through consistent, implementation-ready documentation.

EDUCATION

Dallas Baptist University

Master of Science in Information Technology and Management

Dallas, TX

Jan 2024 - May 2026

SRM Institute of Science and Technology

Bachelor of Technology in Computer Science and Engineering

Chennai, Tamil Nadu, India

Jul 2017 - Jun 2021
